Legend

Relative Infestation Severity

- None
- Low
- Moderate
- High
- Very High
- Property Boundary
- Access Points
- Unimproved Access Road
- Roads

The relative infestation severity was calculated separately for each mapping area. Each mapping area was assigned a cumulative infestation score by adding the cover class category of each non-native plant species contained within the mapping area. Relative infestation severities were categorized as low, moderate, high or very high if cumulative infestation scores were 1-2, 3-4, 5-10 or > 11, respectively.
